- Baker proved in 1968 effective finiteness results for Thue equations.
- Tzanakis and de Weger (1989) implemented practical algorithms to solve Thue equations.
- Bugeaud and Győry (1996) gave explicit bounds for the solutions.

Effective results on twisted Thue equations

Since we can solve single Thue equations, we want to solve families of Thue equations:

< □ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

Ziegler

Effective results on twisted Thue equations

Since we can solve single Thue equations, we want to solve families of Thue equations:

Let  $F \in \mathbb{Z}[X, Y; t]$  be homogeneous in X and Y, irreducible and of degree at least three in X. Let  $m \in \mathbb{Z}$  with  $m \neq 0$ . Then we want to find all solutions  $(X, Y; t) \in \mathbb{Z}^3$  to

F(X, Y; t) = m.

◆□▶ ◆□▶ ▲□▶ ▲□▶ ■ ののの

Effective results on twisted Thue equations

Ziegler

Since we can solve single Thue equations, we want to solve families of Thue equations:

Let  $F \in \mathbb{Z}[X, Y; t]$  be homogeneous in X and Y, irreducible and of degree at least three in X. Let  $m \in \mathbb{Z}$  with  $m \neq 0$ . Then we want to find all solutions  $(X, Y; t) \in \mathbb{Z}^3$  to

$$F(X, Y; t) = m$$

E.g. Thomas proved in 1990 that no solution to

$$X^3 - (t-1)X^2Y - (t+2)XY^2 - Y^3 = \pm 1$$

◆□▶ ◆□▶ ▲□▶ ▲□▶ ■ ののの

with |Y| > 1 exists, if *t* is large.

Effective results on twisted Thue equations

Ziegler

Since we can solve single Thue equations, we want to solve families of Thue equations:

Let  $F \in \mathbb{Z}[X, Y; t]$  be homogeneous in X and Y, irreducible and of degree at least three in X. Let  $m \in \mathbb{Z}$  with  $m \neq 0$ . Then we want to find all solutions  $(X, Y; t) \in \mathbb{Z}^3$  to

$$F(X, Y; t) = m$$

E.g. Thomas proved in 1990 that no solution to

$$X^3 - (t-1)X^2Y - (t+2)XY^2 - Y^3 = \pm 1$$

(日) (日) (日) (日) (日) (日) (日)

with |Y| > 1 exists, if *t* is large. In particular Mignotte (1993) showed that  $|t| \ge 4$  is sufficiently large.

## Exponentially parameterized Thue equations

Effective results on twisted Thue equations

Ziegler

Let  $(G_n^{(0)}), \ldots, (G_n^{(d)})$  be linear recurrence sequences defined over the integers. Then we consider the family of Thue equations

$$G_n^{(0)} X^d + G_n^{(1)} X^{d-1} Y + \dots + G_n^{(d)} Y^d = m.$$

◆□▶ ◆□▶ ▲□▶ ▲□▶ ■ ののの

We want to find all solutions  $(X, Y; n) \in \mathbb{Z}^2 \times \mathbb{N}$ .

## Exponentially parameterized Thue equations

Effective results on twisted Thue equations

Ziegler

Let  $(G_n^{(0)}), \ldots, (G_n^{(d)})$  be linear recurrence sequences defined over the integers. Then we consider the family of Thue equations

$$G_n^{(0)} X^d + G_n^{(1)} X^{d-1} Y + \dots + G_n^{(d)} Y^d = m.$$

We want to find all solutions  $(X, Y; n) \in \mathbb{Z}^2 \times \mathbb{N}$ . E.g. Hilgart (2021) proved that if  $(A_n)$  and  $(B_n)$  satisfy some mild technical conditions, then the exponentially parameterized Thue equation

$$(X - A_n Y)(X - B_n Y)X - Y^3 = \pm 1$$

has only solutions with  $|Y| \leq 1$  provided that *n* is large.

## **Twisted Thue equations**

Effective results on twisted Thue equations

Ziegler

Another form of parameterized Thue equations is to twist them. Let  $K = \mathbb{Q}(\alpha)$  and  $t \ge 1$  an integer, then we call

$$N_{K/\mathbb{Q}}(X - \alpha^t Y) = m$$

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQで

a twisted Thue equation (in one parameter).

## **Twisted Thue equations**

# Main result

Effective results on twisted Thue equations

Ziegler

#### Theorem (Hilgart, Z.)

Let *K* be a number field of degree  $d \ge 3$  and  $s \le d - 2$ . Let  $\gamma_1, \ldots, \gamma_s \in K^*$  be multiplicatively independent algebraic integers such that for each choice of d - 1 embeddings  $\tilde{\sigma}_1, \ldots, \tilde{\sigma}_{d-1} \in \text{Hom}_{\mathbb{Q}}(K, \mathbb{C})$ , we have

$$\operatorname{rank}\begin{pmatrix} \log \left| \frac{\tilde{\sigma}_{1}(\gamma_{1})}{\tilde{\sigma}_{d-1}(\gamma_{1})} \right| & \cdots & \log \left| \frac{\tilde{\sigma}_{1}(\gamma_{s})}{\tilde{\sigma}_{d-1}(\gamma_{s})} \right| \\ \vdots & \ddots & \vdots \\ \log \left| \frac{\tilde{\sigma}_{d-2}(\gamma_{1})}{\tilde{\sigma}_{d-1}(\gamma_{1})} \right| & \cdots & \log \left| \frac{\tilde{\sigma}_{d-2}(\gamma_{s})}{\tilde{\sigma}_{d-1}(\gamma_{s})} \right| \end{pmatrix} = S. \quad (*)$$

Then the Thue equation

$$\left| N_{\mathcal{K}/\mathbb{Q}} \left( X - \gamma_1^{t_1} \cdots \gamma_s^{t_s} Y \right) \right| = 1 \tag{1}$$

◆□▶ ◆□▶ ▲□▶ ▲□▶ ■ ののの

has only finitely many integer solutions  $(X, Y, (t_1, ..., t_s)) \in \mathbb{Z}^2 \times \mathbb{N}^s$ , where  $XY \neq 0$  and  $\mathbb{Q}\left(\gamma_1^{t_1} \cdots \gamma_s^{t_s}\right) = K$ .

# Rank condition and Schanuel's conjecture

Effective results on twisted Thue equations

Ziegler

#### Conjecture (Schanuel's conjecture)

Given any n complex numbers  $z_1, \ldots, z_n$  that are linearly independent over the rational numbers  $\mathbb{Q}$ , the field extension  $\mathbb{Q}(z_1, \ldots, z_n, e^{z_1}, \ldots, e^{z_n})$  has transcendence degree at least n over  $\mathbb{Q}$ .

If Schanuel's conjecture holds, then the multiplicative independence of  $\gamma_1, \ldots, \gamma_s \in K^*$  implies the rank condition (\*).

## How to solve Thue equations – Part I

Effective results on twisted Thue equations

Ziegler

Let F(X, Y) = 1 be a Thue equation and assume that

$$F(X, Y) = (X - \alpha_1 Y) \cdots (X - \alpha_d Y).$$

< □ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

## How to solve Thue equations – Part I

Effective results on twisted Thue equations

Ziegler

Let F(X, Y) = 1 be a Thue equation and assume that

$$F(X, Y) = (X - \alpha_1 Y) \cdots (X - \alpha_d Y).$$

Let  $(X, Y) \in \mathbb{Z}^2$  be a solution then set  $\beta_i = X - \alpha_i Y$ . Let us choose the index *j* such that  $|\beta_i|$  is minimal then we have

$$|\beta_j| \ll \frac{1}{|Y|^{d-1} \prod_{i \neq j} |\alpha_j - \alpha_i|}$$

## How to solve Thue equations – Part I

Effective results on twisted Thue equations

Ziegler

Let F(X, Y) = 1 be a Thue equation and assume that

$$F(X, Y) = (X - \alpha_1 Y) \cdots (X - \alpha_d Y).$$

Let  $(X, Y) \in \mathbb{Z}^2$  be a solution then set  $\beta_i = X - \alpha_i Y$ . Let us choose the index *j* such that  $|\beta_j|$  is minimal then we have

$$|\beta_j| \ll \frac{1}{|Y|^{d-1} \prod_{i \neq j} |\alpha_j - \alpha_i|}$$

Siegel's identity for distinct indices k, l, j is

$$\beta_j(\alpha_k - \alpha_l) + \beta_k(\alpha_l - \alpha_j) + \beta_l(\alpha_j - \alpha_k) = \mathbf{0}.$$

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQで

## How to solve Thue equations - Part I

We get

Effective

results on twisted Thue equations

$$\underbrace{\frac{\beta_j}{\beta_k} \cdot \frac{\alpha_k - \alpha_l}{\alpha_j - \alpha_l}}_{=:L} + \underbrace{\frac{\beta_l}{\beta_k} \cdot \frac{\alpha_j - \alpha_k}{\alpha_j - \alpha_l}}_{=:L'} = 1$$

#### and get

 $\log |L'| \ll |Y|^{-d}.$ 

Since  $\beta_l$  and  $\beta_k$  are units we can write them as a product of fundamental units  $\eta_1, \ldots, \eta_t$  in the normal closure of  $K = \mathbb{Q}(\alpha_1)$  and obtain an inequality of the form

$$b_1 \log |\eta_1| + \cdots + b_t \log |\eta_t| + \log \left| \frac{\alpha_j - \alpha_k}{\alpha_j - \alpha_l} \right| \ll |Y|^{-d}$$

An application of Baker-type bounds we obtain

 $\log \log |Y| \gg \log h(\beta_j) \gg \log \max\{|b_i|\} \gg \log |Y|,$ which yields a contradiction for large |Y|.

## The theorem of Bugeaud and Győry

Effective results on twisted Thue equations

#### Ziegler

#### Theorem (Bugeaud, Győry 1996)

Let  $B \ge \max(|m|, e)$ , f be an irreducible polynomial with root  $\alpha$  and  $K = \mathbb{Q}(\alpha)$ . Let R be the regulator of K and r be the unit rank. Let H be an upper bound to the absolute values of the coefficients of f and  $n = \deg f \ge 3$ . Let  $F(X, Y) = Y^n f\left(\frac{X}{Y}\right)$ , then all solutions  $(X, Y) \in \mathbb{Z}^2$  of the Thue equation F(X, Y) = m satisfy

 $\log \max \left( |X|, |Y| \right) \leq c \cdot R \cdot \max \left( \log R, 1 \right) \left( R + \log \left( HB \right) \right),$ 

where  $c = 3^{r+27}(r+1)^{7r+19}n^{2n+6r+14}$ .

Effective results on twisted Thue equations

#### We want to solve

Ziegler

$$N_{K/\mathbb{Q}}(X-\gamma_1^{t_1}\cdots\gamma_s^{t_s}Y)=\pm 1.$$

Effective results on twisted Thue equations

### We want to solve

$$N_{K/\mathbb{Q}}(X-\gamma_1^{t_1}\cdots\gamma_s^{t_s}Y)=\pm 1.$$

Let us write:

$$t := \max_{i \in \{1, \dots, s\}} |t_i|$$

Effective results on twisted Thue equations

### We want to solve

$$N_{K/\mathbb{Q}}(X-\gamma_1^{t_1}\cdots\gamma_s^{t_s}Y)=\pm 1.$$

#### Let us write:

$$t := \max_{i \in \{1, \dots, s\}} |t_i|$$

$$\beta_i := \tilde{\sigma}_i \left( \boldsymbol{X} - \gamma_1^{t_1} \cdots \gamma_s^{t_s} \boldsymbol{Y} \right)$$

Effective results on twisted Thue equations

### We want to solve

$$N_{K/\mathbb{Q}}(X-\gamma_1^{t_1}\cdots\gamma_s^{t_s}Y)=\pm 1.$$

Let us write:

$$t := \max_{i \in \{1,...,s\}} |t_i|$$
 $eta_i := ilde{\sigma}_i \left( X - \gamma_1^{t_1} \cdots \gamma_s^{t_s} Y 
ight)$  $\sigma_i = ilde{\sigma}_i \left( \gamma_1^{t_1} \cdots \gamma_s^{t_s} 
ight)$ 

Effective results on twisted Thue equations

### We want to solve

$$N_{K/\mathbb{Q}}(X-\gamma_1^{t_1}\cdots\gamma_s^{t_s}Y)=\pm 1.$$

Let us write:

$$t := \max_{i \in \{1,...,s\}} |t_i|$$
 $eta_i := ilde{\sigma}_i \left( X - \gamma_1^{t_1} \cdots \gamma_s^{t_s} Y 
ight)$  $\sigma_i = ilde{\sigma}_i \left( \gamma_1^{t_1} \cdots \gamma_s^{t_s} 
ight)$ 

After reshuffling the indices, we can further assume that  $|\sigma_1| \geq \cdots \geq |\sigma_d|$ .

# A gap principal for S-units

Effective results on twisted Thue equations

Ziegler

To avoid the first problem we use a gap-principal for *S*-units which was proved in similar forms by Tijdeman (1973) and Stewart (2018).

#### Lemma (HZ 2022)

Let *K* be a number field of degree  $d \ge s$  and  $\gamma_1, \ldots, \gamma_s \in K^*$ multiplicatively independent. Let  $\gamma = \gamma(t_1, \ldots, t_s) = \gamma_1^{t_1} \cdots \gamma_s^{t_s}$ for non-zero integers  $t_1, \ldots, t_s$ . Then for any two conjugates  $\gamma^{(1)}, \gamma^{(2)}$  of  $\gamma$  with  $M = |\gamma^{(1)}| > |\gamma^{(2)}| = m$  there exists an effectively computable constant *c* independent of  $t_1, \ldots, t_s$ such that

$$M-m>rac{M}{h(M)^c}.$$

◆□▶ ◆□▶ ▲□▶ ▲□▶ ■ ののの

## Application of the gap principal

Effective results on twisted Thue equations

Ziegler

We apply this lemma to the product in the inequality

$$\left|\beta_{j}\right| \ll rac{1}{\left|Y\right|^{d-1}\prod_{\substack{i\in\{1,\dots,d\}\\i\neq j}}\left|\sigma_{j}-\sigma_{i}\right|}$$

< □ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

## Application of the gap principal

Effective results on twisted Thue equations

Ziegler

We apply this lemma to the product in the inequality

$$\left|\beta_{j}\right| \ll rac{1}{\left|Y\right|^{d-1}\prod_{\substack{i\in\{1,\ldots,d\}\\i\neq j}}\left|\sigma_{j}-\sigma_{i}\right|}$$

and get (after some computations):

$$L := \frac{\beta_j}{\beta_k} \cdot \frac{\sigma_k - \sigma_l}{\sigma_j - \sigma_l} \ll \frac{\log |\sigma_1|^{(d-1)c}}{|Y|^d |\sigma_1|^{\frac{1}{d-1}}} \cdot \frac{|\sigma_k - \sigma_l|}{|\sigma_j - \sigma_k| |\sigma_j - \sigma_l|}.$$

◆□ > ◆□ > ◆三 > ◆三 > ・三 ・ のへぐ

## Two cases

Effective results on twisted Thue equations

Ziegler

We distinguish now between two cases:

Case 1 There exist at least two distinct indices  $i \in \{1, ..., d\} \setminus \{j\}$  such that  $\left|\log \left|\frac{\sigma_i}{\sigma_j}\right|\right| \ge \kappa \log t$ , where  $\kappa$  is a (fixed but) sufficiently large constant independent of the solution  $(X, Y, (t_1, ..., t_s))$ .

(日) (日) (日) (日) (日) (日) (日)

#### Two cases

Effective results on twisted Thue equations

Ziegler

We distinguish now between two cases:

Case 1 There exist at least two distinct indices  $i \in \{1, ..., d\} \setminus \{j\}$  such that  $\left|\log \left|\frac{\sigma_i}{\sigma_j}\right|\right| \ge \kappa \log t$ , where  $\kappa$  is a (fixed but) sufficiently large constant independent of the solution  $(X, Y, (t_1, ..., t_s))$ .

Case 2 For all but one index  $i \in \{1, ..., d\} \setminus \{j\}$ , we have  $\log \left|\frac{\sigma_i}{\sigma_j}\right| \le \kappa \log t$ .

### Case 1 – Construction of a linear form I

Effective results on twisted Thue equations

Ziegler

We now return to Siegel's identity L + L' = 1 and get  $\left|\log L'\right| = \left|\log\left|\frac{\beta_l}{\beta_k}\right| + \log\left|\frac{\sigma_j - \sigma_k}{\sigma_j - \sigma_l}\right|\right| = \left|\log|1 - L|\right| \ll e^{-c_1 t}.$ 

Let us write  $\sigma_{A} = \max(|\sigma_{j}|, |\sigma_{k}|), \sigma_{a} = \min(|\sigma_{j}|, |\sigma_{k}|)$  and  $\sigma_{B} = \max(|\sigma_{j}|, |\sigma_{l}|), \sigma_{b} = \min(|\sigma_{j}|, |\sigma_{l}|)$ . Then  $\log \left| \frac{\sigma_{j} - \sigma_{k}}{\sigma_{i} - \sigma_{l}} \right| = \log \frac{\sigma_{A}}{\sigma_{B}} + \log \left| \frac{1 - \sigma_{a}/\sigma_{A}}{1 - \sigma_{b}/\sigma_{B}} \right|.$

# Case 1 – Construction of a linear form I

Effective results on twisted Thue equations

Ziegler

We now return to Siegel's identity L + L' = 1 and get  $\left|\log L'\right| = \left|\log\left|\frac{\beta_l}{\beta_k}\right| + \log\left|\frac{\sigma_j - \sigma_k}{\sigma_j - \sigma_l}\right|\right| = \left|\log|1 - L|\right| \ll e^{-c_1 t}.$ 

Let us write  $\sigma_{A} = \max(|\sigma_{j}|, |\sigma_{k}|), \sigma_{a} = \min(|\sigma_{j}|, |\sigma_{k}|)$  and  $\sigma_{B} = \max(|\sigma_{j}|, |\sigma_{l}|), \sigma_{b} = \min(|\sigma_{j}|, |\sigma_{l}|)$ . Then

$$\log \left| \frac{\sigma_j - \sigma_k}{\sigma_j - \sigma_l} \right| = \log \frac{\sigma_A}{\sigma_B} + \log \left| \frac{1 - \sigma_a / \sigma_A}{1 - \sigma_b / \sigma_B} \right|$$

Since *k*, *l* satisfy  $\frac{\sigma_a}{\sigma_A}, \frac{\sigma_b}{\sigma_B} \leq t^{-\kappa}$  we get

$$\log \left| rac{1 - \sigma_{a} / \sigma_{A}}{1 - \sigma_{b} / \sigma_{B}} 
ight| = O\left(t^{-\kappa}
ight),$$

hence

$$\Lambda = \left| \log \left| \frac{\beta_I}{\beta_k} \right| + \log \frac{\sigma_A}{\sigma_B} \right| \ll t^{-\kappa}.$$

### Case 1 – Construction of a linear form II

Effective results on twisted Thue equations

Ziegler

Assume for now that  $\Lambda \neq 0$ , *r* the unit rank of *K*, then we have

$$\beta_k = \left(\eta_1^{(k)}\right)^{b_1} \cdots \left(\eta_r^{(k)}\right)^{b_r}$$

< □ > < 同 > < Ξ > < Ξ > < Ξ > < Ξ < </p>

in terms of the fundamental units  $\eta_1, \ldots, \eta_r$  (and similar for  $\beta_l$ ).

### Case 1 – Construction of a linear form II

Effective results on twisted Thue equations

Ziegler

Assume for now that  $\Lambda \neq 0$ , *r* the unit rank of *K*, then we have

$$\beta_k = \left(\eta_1^{(k)}\right)^{b_1} \cdots \left(\eta_r^{(k)}\right)^{b_r}$$

in terms of the fundamental units  $\eta_1, \ldots, \eta_r$  (and similar for  $\beta_l$ ). We can write  $\sigma_A = \left(\gamma_1^{(A)}\right)^{t_1} \cdots \left(\gamma_s^{(A)}\right)^{t_s}$ , same for  $\sigma_B$ . We can thus write

$$\begin{split} \Lambda &= \left| \sum_{i=1}^{r} b_i \left( \log \left| \eta_i^{(l)} \right| - \log \left| \eta_i^{(k)} \right| \right) + \sum_{i=1}^{s} t_i \left( \log \left| \gamma_i^{(A)} \right| - \log \left| \gamma_i^{(B)} \right| \right) \right| \\ &\ll t^{-\kappa}. \end{split}$$

### Case 1 – a contradiction

Effective results on twisted Thue equations

Ziegler

Note that by the theorem of Bugeaud and Győry we have  $\log |X|, \log |Y| \ll t$ .

▲□▶▲□▶▲□▶▲□▶ □ のQ@

### Case 1 – a contradiction

Effective results on twisted Thue equations

Note that by the theorem of Bugeaud and Győry we have  $\log |X|, \log |Y| \ll t$ . Therefore we have

$$\left|\sum_{n=1}^{r} b_n \left( \log \left| \eta_n^{(i)} \right| \right) \right| = |\log |\beta_i||$$
$$= |\log(X - \sigma_i Y)| \ll \log |Y| + \log |\sigma_1| \ll t.$$

▲□▶▲□▶▲□▶▲□▶ □ のQ@

# Case 1 – a contradiction

Effective results on twisted Thue equations

Ziegler

Note that by the theorem of Bugeaud and Győry we have  $\log |X|, \log |Y| \ll t$ . Therefore we have

$$\left|\sum_{n=1}^{r} b_n \left( \log \left| \eta_n^{(i)} \right| \right) \right| = |\log |\beta_i||$$
$$= |\log(X - \sigma_i Y)| \ll \log |Y| + \log |\sigma_1| \ll t.$$

We get  $\max\{|b_i|\} \ll t$ . But applying lower bounds for linear forms in logarithms we obtain

$$\kappa \log t \leq c_2 \log t$$

◆□▶ ◆□▶ ▲□▶ ▲□▶ □ のQ@

which yields a contradiction, if we choose  $\kappa$  large enough.

### Case 2

Effective results on twisted Thue equations

Ziegler

If Case 1 does not hold, then  $\log |\sigma_i/\sigma_j| \ll \log t$  holds for all but one index, say i = d - 1 after reordering. Also put j = d.

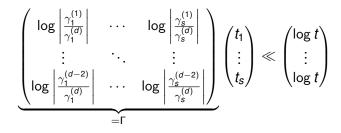

< □ > < 同 > < Ξ > < Ξ > < Ξ > < Ξ < </p>

### Case 2

Effective results on twisted Thue equations

Ziegler

If Case 1 does not hold, then  $\log |\sigma_i/\sigma_j| \ll \log t$  holds for all but one index, say i = d - 1 after reordering. Also put j = d. If we rewrite  $\log |\sigma_i/\sigma_d| \ll \log t$  for  $i \in \{1, \ldots, d-2\}$ , then

◆□▶ ◆□▶ ▲□▶ ▲□▶ ■ ののの

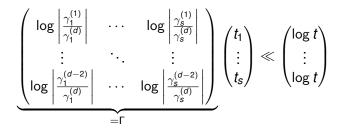

holds.

### Case 2

Effective results on twisted Thue equations

Ziegler

If Case 1 does not hold, then  $\log |\sigma_i/\sigma_j| \ll \log t$  holds for all but one index, say i = d - 1 after reordering. Also put j = d. If we rewrite  $\log |\sigma_i/\sigma_d| \ll \log t$  for  $i \in \{1, \ldots, d-2\}$ , then

(ロ) (同) (三) (三) (三) (○) (○)

holds. This yields  $t \ll \log t$ , provided that  $\Gamma$  has full rank.

Effective results on twisted Thue equations

Ziegler

Consider the family of simplest cubic fields  $K_n = \mathbb{Q}(\alpha_n)$ , where the minimal polynomial of  $\alpha = \alpha_n$  is

$$X^3 - (n-1)X^2 - (n+2)X - 1.$$

It is well known that  $\epsilon = \alpha$  and  $\delta = -\frac{1}{\alpha+1}$  are multiplicative independent units. Levesque and Waldschmidt conjecture that the twisted Thue equation

$$N_{K_n/\mathbb{Q}}(X-\epsilon^s\delta^t Y)=\pm 1$$

has at most finitely many solutions (X, Y, n, s, t) with  $\max\{|X|, |Y|\} \ge 2$  and  $(s, t) \ne (0, 0)$ .

Effective results on twisted Thue equations

Ziealer

Let us write  $\sigma_{s,t} = \epsilon^s \delta^t$ . Then it seems that our method is applicable to the conjecture of Levesque and Waldschmidt as long as not all conjugates of  $\sigma_{s,t}$  are close together.
